Automation/Implementation Engineer

Engineer with a focus on migrating data and proven success implementing automated workflows. Writes code to make APIs talk to each other and perform required transformations and calculations. Graduate of Rice University and the UT Austin Coding Boot Camp. Works with JSON data and Ruby. Skills in HTML, CSS, Javascript, and databases. Recognized as adept technical leader with expertise understanding business requirements, identifying customer pain points, and implementing solutions that provide business value.

EXPERIENCE

Automation Engineer - Cloudsnap

2019 - present

- **Code functions** using Ruby to parse, generate, calculate and format JSON data tailored to client's needs.
- **Analyze database** diagrams/documentation and gain knowledge in API protocols and table relationships to ensure successful solutions installation, integration, and deployment.
- **Build workflows** for client's data integration needs between different ERP's (SAP Concur, NetSuite, Business Central, WorkDay, ADP, etc.)
- **Troubleshoot resolve** platform and failing workflow issues.
- **Technical consultant** for enterprise customers ensuring technical integrity and high quality project delivery.
- **Proactively identify and capture** new opportunities leveraging engineering background to provide high levels of technical expertise.

Investigations Specialist - Accenture via BC Forward

2018 - 2019

- **Conduct deep** level investigations for malicious activity within client's social media platform.
- **Lead training** sessions for new team members.
- **Identify and capture** new patterns of malicious behavior used to circumvent the platform's policy.
- **Generate and relay** feedback for improving team tools and productivity.
- **Serve as reliable** source of information to coworkers concerning policy and procedure.
